PROFESSIONAL SUMMARY

Computer Science (AI & ML) undergraduate with a strong foundation in Python, Java, and full-stack web development. Experienced in building and deploying full-stack AI applications, including multi-user chatbot platforms and REST API integrations. Seeking internship opportunities in software development or AI engineering.

EDUCATION

Madanapalle Institute of Technology & Science (Deemed to be University) <i>B.Tech, Computer Science Engineering (AI & ML) — CGPA: 8.8 / 10</i>	2024 – 2028
Narayana Junior College, Tirupati <i>Intermediate (MPC) — Percentage: 97.4%</i>	2022 – 2024
AP Model School, Thamballapalli <i>SSC (10th Class) — Percentage: 87.1%</i>	2022

TECHNICAL SKILLS

Languages	Python, Java, C, JavaScript
Web & Frameworks	HTML, CSS, React, FastAPI, Node.js, Vite, REST APIs
Databases	MySQL, PostgreSQL, SQLite
Tools & Platforms	Git, GitHub, Uvicorn, OAuth 2.0, Render, MS Office

PROJECTS

AskKartik.AI — AI Chatbot Assistant	Live Demo ↗ GitHub ↗
- Build a full-featured, multi-user AI chatbot platform with Python, FastAPI, and the Groq API (Llama 3.3), delivering ChatGPT-style word-by-word streaming responses. - Implemented a user account system with session-cookie authentication and PBKDF2-hashed passwords, plus optional Google OAuth 2.0 sign-in. - Designed persistent, multi-turn conversation storage using SQLite locally and PostgreSQL in production, syncing chat history across devices. - Integrated live web search (Tavily API) to ground responses on current events with cited sources. - Deployed to Render with an automated Postgres provisioning pipeline, ensuring zero data loss across deploys.	
Genie NL2SQL — Natural Language to SQL Platform	GitHub ↗
- Architected a 3-tier microservice system (React/Vite UI, FastAPI conversation-service, FastAPI genie-service) that converts natural-language questions into executable SQL via the Databricks Genie REST API. - Built orchestration REST endpoints (POST /conversations, GET /messages) with asynchronous polling to return SQL queries and structured result tables to the UI. - Implemented a secure, token-authenticated client service to interface with the Databricks Genie API.	
Educational Keylogger — Cybersecurity Internship Project	GitHub ↗
- Build a consent-gated, OS-level keystroke capture tool in Python (pynput) with foreground-window context tracking and local-only logging (no network exfiltration). - Implemented log rotation and at-rest Fernet encryption/decryption, plus a customtkinter desktop GUI with live capture preview and encrypt/decrypt controls. - Authored a detection-and-defense analysis report explaining how the mechanism can be identified and mitigated, demonstrating security fundamentals from both offensive and defensive perspectives.
